***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Judging the signal is whether audio or not is indefinite since it is stated in the claim that the received signal is audio. The claims, in this office action, are addressed by treating the non audio signal as noise. Correction is required.

Claim 1 recites the limitation "the second encoding method" in line 11. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-6 and 9-14 are rejected under 35 U.S.C. 102(a) as being anticipated by the background of the application and particularly figure 5, depicting a conventional code conversion device.

As to claim 1, the figure and the corresponding disclosure on page 2, explains a code conversion method for converting a code encoded according to a first method to a code encoded according to a second method, by first decoding the encoded data (1A),

then judging whether the audio is noise or not (5) and then encoding the audio data according to a second method (2A) where a second encoded data string is generated (4) (page 2, lines 22-28).

As to claims 2-4, according to the conventional code converter disclosed at the background of the present application, header and frame type information determining the input data are determined at the decoder, and transferred to the judging circuit while the payload is transferred to the second encode, for encoding in the second method based on the type of signal that is received by the judging circuit (Page 3, lines 10-15; Fig.5).

Claims 5-6 and 9-14 are analogous to the claims above and are rejected for the foregoing reasons.

***Allowable Subject Matter***

Claims 7-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: claims 7-8 are allowable because the decoding device having audio decoding circuit and noise decoding circuit as recited in the claims are not described in the transcoder admitted at the background of the present application.
